Summary

Gen AI Engineer with **3 years** of experience designing and deploying AI solutions with **Azure OpenAI, LangChain, RAG**, and **Agentic AI** for enterprise clients. Proficient in building **chatbots** and document Q&A systems with Large Language Models, with a focus on solving real-world problems. Experienced in working with **Azure Cognitive Services**, handling unstructured data, and leveraging **vector databases** like **FAISS** for efficient information retrieval. Skilled in developing and deploying scalable AI applications in cloud environments with a focus on performance and reliability.

Experience

Sonata Software

Gen AI Developer

03/2025 – Present

- **Generative AI Development:** Built LLM-based application using RAG and semantic search for handling unstructured data. Developed solutions using LLMs (Azure OpenAI, Gemini) for text-based and multimodal use cases. Worked with frameworks like LangChain and Hugging Face to develop intelligent systems for chatbots, document understanding, and content generation.
- **End-to-End AI Solution Development:** Designed end-to-end generative AI pipelines, from data preprocessing and model development to deployment and optimization. Demonstrated ability to integrate AI solutions into real-world applications such as chatbots, content generation tools, and recommendation systems.
- **Experience in AI Solutions Development:** Specializes in developing and optimizing AI solutions for enterprise clients using Azure Cognitive Services and Microsoft technologies.
- **Broad Range of Azure Expertise:** Proficient with key Azure cognitive services, Azure OpenAI, including Document Intelligence, Face API, Computer Vision, QnA Maker, LUIS (Language Understanding), Text Analytics, and Speech Services, Azure BOT Services
- **Azure OpenAI Integration:** Worked on integrating cutting-edge AI models through Azure OpenAI, automating and enhancing client applications.

Skills

Agentic AI • Retrieval-Augmented Generation (RAG) • LangGraph / LangChain
Cloud Computing (Azure) • Model Context Protocol (MCP) • Python
Generative AI • Transformers / Hugging Face • Snowflake
AI / Machine Learning • Neural Networks • Docker
FastAPI / Streamlit • Computer Vision • Vector Databases (FAISS)
Prompt Engineering • Azure AI Foundry • Apache Airflow
Azure Cognitive Services • Azure OpenAI • Semantic Search Systems

Projects

Smart RAG Chatbot (AI Document Q&A System):

Tech Stack: FastAPI | Streamlit | FAISS | Embeddings | Gemini LLM (RAG) | Python

08/2025

- **Business Impact:** Built an AI-powered document search system that simplifies how users retrieve information from unstructured data. It replaces manual document reading by using **semantic search** based on embeddings to quickly find relevant content. The system improves answer quality by generating responses grounded in document context instead of relying on basic keyword matching. Designed a reusable and scalable pipeline that supports multiple file formats such as **PDF, DOCX**, and **Excel**, with persistent **FAISS**-based storage for efficient reuse across sessions.
- **Technical Details:** Users upload documents through a **Streamlit UI**, and the **FastAPI** backend processes them by extracting and normalizing the text. The content is split into smaller chunks to efficiently handle large documents. These chunks are converted into embeddings using a **HuggingFace** model and stored in a **FAISS vector database** with persistence. When a query is submitted, it is converted into an embedding and matched against stored vectors using similarity search to retrieve relevant chunks. The retrieved context is combined with the query and passed to a **Gemini LLM** to generate a context-aware response. The system is built with modular components for **document processing, vector storage**, and **LLM interaction**, with basic error handling and logging.

Agentic AI-Powered Customer Support Agent:

Tech Stack: Agentic AI | RAG | Streamlit | Gemini API | Python

03/2025

- Business Impact:** Built an AI-powered customer support system that helps automate responses to common user queries, reducing the need for manual support. The system uses a hybrid approach, where it first checks a knowledge base for quick answers and then uses an AI model for more complex queries. This improves response speed while also keeping API usage efficient. The overall design is scalable and can be extended into a more advanced multi-agent or enterprise-level solution.
- Technical Details:** Built an **agentic AI-based customer support system** with a modular Python backend and Streamlit interface, enabling real-time query handling and response generation. Designed a **hybrid decision layer** that intelligently routes queries between a knowledge base (for fast, predefined responses) and **LLM-powered reasoning using the Gemini API** for dynamic and complex queries. Implemented a **manager agent** for intent-based routing and decision-making, along with secure API configuration and **robust fallback handling** for failures and quota limits.
- Designed a **modular architecture (agents and tools)**, enabling easy extension into a multi-agent system while demonstrating core agentic principles (decision → action → response) with optimized performance and scalability.

Personal Projects & POCs

08/2024

- AI Document Summarizer + Q&A Bot:** Developed an AI-powered system for document summarization and question answering using RAG and LLMs, enabling extraction of key insights and natural language interaction with documents.
- Smart Search Bot:** Designed and implemented a Generative AI-powered bot using Retrieval-Augmented Generation (RAG) and Large Language Models (LLMs) to enable seamless document uploads and intelligent search capabilities.
- Medical Assistant:** Built a Generative AI-based bot leveraging RAG and LLMs to assist patients by providing accurate and timely responses to their medical queries.
- Geetha-GPT:** Developed a specialized AI bot focused on the Bhagavad Gita, enabling users to ask questions and receive contextual insights based on the text.

Education

Nagarjuna college of engineering and technology

B.E. in Electronics and Communication Engineering – 7.76 CGPA

08/2018 - 08/2022

Awards

& DNA Award 'RUN FOR IT'

Ġ PEER 360 Award 'The Collaborator'

* PEER 360 Award 'The Role Model'

Certifications

Microsoft AI 900

Q&A Certification on Azure Gen AI Advance

Q&A ltd Certification on Azure OpenAI Advance
